*Strap locks to accommodate almost any strap

*Easy snap face shield tabs

Materials

Shield: The shield is made from .020 PETG Clear Polyester Sheet or thinner gauge material as it is available on the common market. It is designed to be removed for easy cleaning and replacement as needed. Replacement shields will be available throughout the duration of this project and beyond as this is a material that we would normally stock.

Visor: The visor is made from .220 white cast acrylic. Our design keeps the shield at an appropriate distance to reduce fogging. The tabs on the front are designed to make the shield snap on and off easily. There is a foam strip where it rests against the forehead to assist with comfort in long term use. An elastic band easily attaches to the frame. Elastic band is included.
