

Maryland Manufacturers

Reducing the Risk of Business Disruption from COVID-19

Ventilation, Air Filtration **& HVAC**

"Protecting Maryland's manufacturers against COVID-19 is absolutely vital to our state's health and economic recovery."

Larry Hogan
Governor
State of Maryland

Manufacturers can potentially reduce the risk of business disruption from COVID-19 and other respiratory pathogens by improving facility airflow, filtration & ventilation. RMI's NO-COST Manufacturing Disruption Mitigation Assistance Program (MDMAP) can help Maryland manufacturers with this process.

RMI's team of engineering professionals will:

- Provide a review of system operations related to ventilation, air flow, and HVAC systems.
- Identify solutions (e.g., HVAC system upgrades) and a recommendation for improving facility air flow, filtration & ventilation.
- Connect companies to the Maryland Energy Administration (MEA) for assistance with funding resources for HVAC and other air flow equipment upgrades.
- Provide information on all MEA grants, loans, and other financial resources.
